

Salvo™ InSite

Contact: sales@servtrayou.com

Salvo InSite is a web application that brings safety and productivity to the loading bay. The platform digitises the Salvo Loading Bay Safety System, currently installed at over 12,000 bays globally. With Salvo InSite, data is automatically recorded and transmitted to the cloud providing real time information on the status of the loading bay. The Salvo InSite platform allows facilities to make informed decisions, ensuring maximised productivity at the loading bay is achieved while keeping personnel safe.

Real Time Bay Status

Optimise Performance

Identify inefficiencies and bottlenecks in loading bay operations through automatic data capture and visualisation.

Track Results

Increased understanding of how operational changes are affecting loading bay performance through dashboards, historical reports and live KPIs.

Managed Safety Compliance

Safety at the bay is managed through site usage reports, ensuring the loading bay safety system is being used correctly.

Reduce Cost and Effort

Costs associated with manual data entry, analysis, detention fees and claims are reduced through automatic data capture and historic traceability capabilities.
